

RESEARCH GRANT APPLICATION

National Eye Institute – Vision Research Innovation Program

Grant Title	AI-Assisted Early Detection of Diabetic Retinopathy
Principal Investigator	Dr. Sarah Kim
Funding Agency	National Eye Institute
Requested Amount	\$250,000.00
Application Deadline	September 15, 2026
Project Status	Pending
Compliance Status	Under Review
Project Period	January 1, 2027 – December 31, 2028

Project Summary

This project will develop and evaluate an artificial intelligence workflow for identifying signs of diabetic retinopathy from retinal images. The system will organize image metadata, flag potentially high-risk cases, and create structured summaries for review by qualified personnel.

Specific Objectives

- Build a secure pipeline for importing and organizing retinal image data.
- Train and evaluate a machine-learning model for early risk detection.
- Create an administrative dashboard for study progress and reporting.

Budget Summary

Personnel	\$140,000.00
Software and Cloud Services	\$35,000.00
Research Equipment	\$40,000.00
Data Management and Compliance	\$20,000.00
Other Direct Costs	\$15,000.00

Total Requested Funding: \$250,000.00

Compliance and Administrative Notes

- Institutional review documentation is currently under review.
- Data will be stored in approved secure systems.
- Access will be limited to authorized project personnel.
